MIDSUMMER

LIST

SOMERSET'S

*Snap*s for Greenhouse Forcing

ORIGINATOR'S STRAINS

Modern varieties have really "snapped" this flower back into popularity. There are few flowers that are as profitable for the greenhouse grower. With proper selection of varieties and variation of sowing dates, it is possible to have flowers almost the entire year. There is a good market in June and July, especially for white, that is not now being adequately supplied.

THE HYBRIDS

Uniform, free flowering, hybrid vigor, all go to making an article that is profitable to grow. Because of the extra vigor, it is best to be careful that you do not overfeed.

Barbara. Large flowered bronze with a pink throat. Considered by some, the best bronze hybrid.

Better Times. One of the older hybrids. The color of the Better Times rose and the habit of Christmas Cheer. 1/2 Pkt. **\$1.25**; Pkt. **\$2.00**

Christina. Bright pink shade somewhat deeper than Mary Ellen. It is earlier than Mary Ellen and the flowers are larger and more closely spaced.

Christmas Cheer. The popular variety which is now the standard rose pink.

Dorcas Jane. Fine soft pink.

Fringed White Snow. Pure, clear white. Best for midseason to late.

Indian Summer. Medium bronze lighter than Lady Dorothy.

Jubilee. By the introducer of Maryland Pink. A light golden bronze shade with overtones of pink. Has large individual florets and a large full spike.

Kathleen. Color similar to Mary Ellen but superior in all other respects. An all season variety, extra vigor makes it possible to use Kathleen with good results for summer flowering. Outstanding for keeping quality. Awarded gold medal by both N. Y. and N. J. florist clubs.

Mary Ellen. Popular silvery pink. 1/2 Pkt. **\$1.50**; Pkt. **\$2.50**

Maryland Pink Improved. Longer stronger stems and larger spikes.

Maryland White. Quality paper white hybrid, equal in earliness, yield and growth to Maryland Pink.

Mountain Pink. Clear, rose pink similar to Cheviot Maid. Slightly later than Christmas Cheer. Vigorous clean grower.

Patricia. Vigorous yellow. Habit of growth similar to Margaret but blooms earlier.

Priscilla Ann. New early velvety crimson by the introducer of Christina and Mary Ellen.

Gold Mine. A rich sparkling yellow, much superior in flower, stem and production to the old favorite Ethel. We consider it one of the best yellows.

Gold Rush. Quite similar to the above, except that it is several shades lighter in color.

Red Wing. Deep velvety red with true hybrid vigor.

Rockwoods Early Pink. Pastel pink good for the entire season.

Sunglow. This was the first bronze hybrid. It has been under test for several years and we think highly of it. The color is a golden bronze shade, and it breaks freely and flowers early and throughout the winter.

Prices any of the above hybrid Snapdragons, unless noted — 1/2 Pkt. **\$1.75**; Pkt. **\$3.00**

Annual Larkspur

For outdoor flowering, a favorite method is to sow during late August and early September, directly where to bloom. Sturdy plants will develop that will carry over winter with little or no protection and flower the following June. Under glass sow directly in the bench in rows 8 inches apart. Thin to 3 or 4 inches. Flowers may be expected in late April or May from an October or November sowing. Lights will mature the crop 2-4 weeks earlier.

Florist's Stocks

(19000 seeds per oz.)

This important cut flower assumes even greater importance as labor and other costs rise. They are best grown in a temperature of 50-60 degrees. Sowing direct into the bench where they are to bloom makes for stronger, more vigorous plants. Rows are usually made 6 inches apart and the plants are thinned to stand approximately 3 inches. Selection of the stronger seedlings will have a tendency to increase the percentage of doubles. Proper feeding with greenhouse Vigoro or Hy-Gro (every two weeks until buds form) will be found beneficial and greatly improve the quality.

Exhibition Gold Medal—New York Florist Club
Silver Medal—New Jersey Florist Club

Unique and different

Leaves are curled, waved or crimped

Unusual, rich effect

Attractive in all sizes

Distinct from any other Ivy, CURLILOCKS has a growth similar to the Pittsburgh Ivy but with curled, wavy or crimped leaves. This curling is increased when grown in full sun.

Primarily for use in plant combinations and interior decoration, hardiness has not been thoroughly tested, but we have reports that it survived several winters in the vicinity of New York City.
